

Open vs code

Open folder – select the folder where the user story vs code is available in local

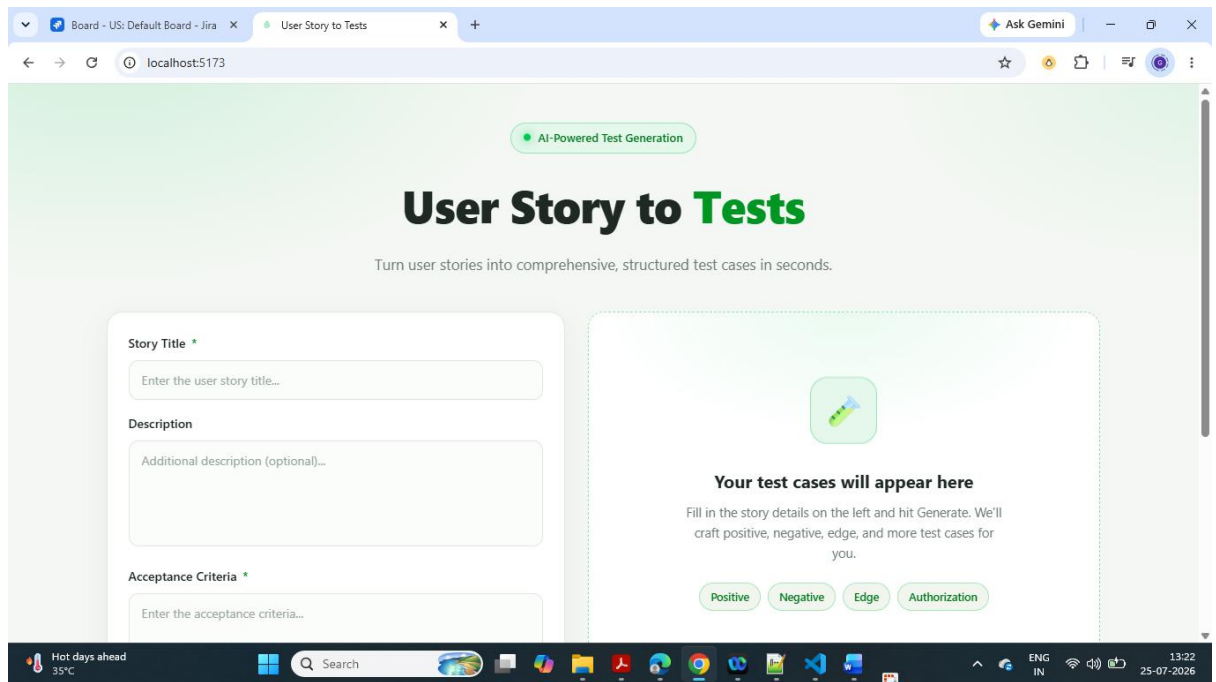

Open env – provide groq api key

Right click env and select open in integrated terminal and run the below commands

Npm install

Npm run dev

Copy the local host url and open that url in browser

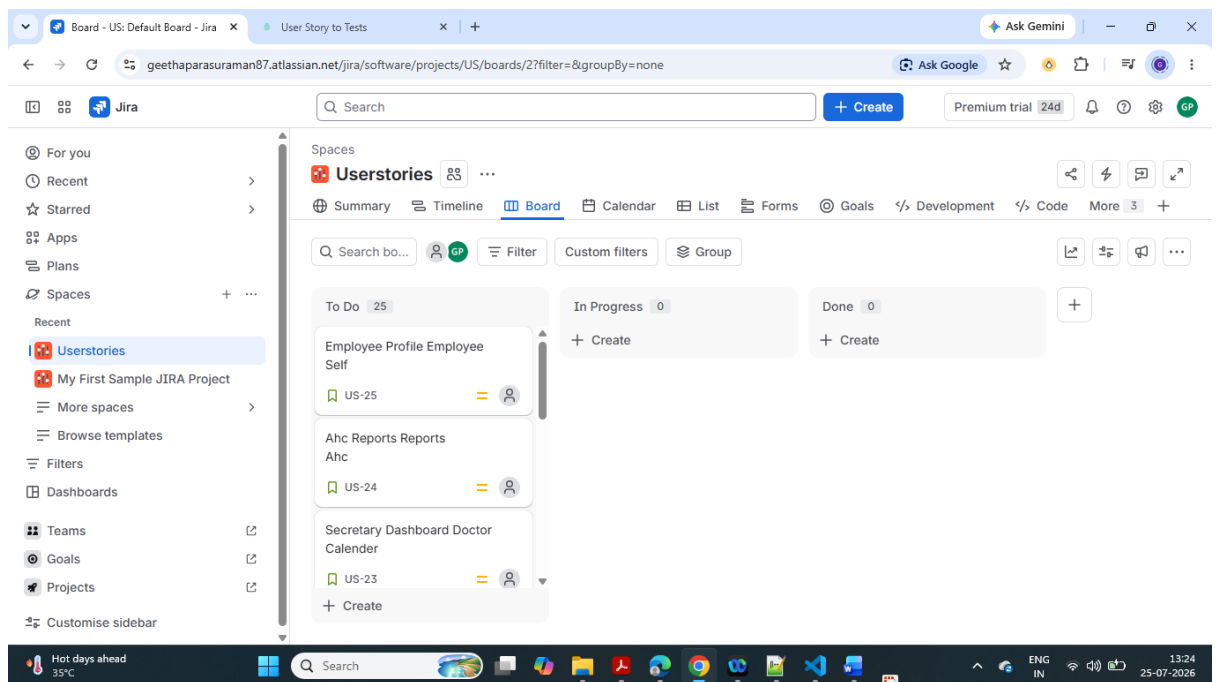

Generate API token from JIRA and note down the below jira details from jira

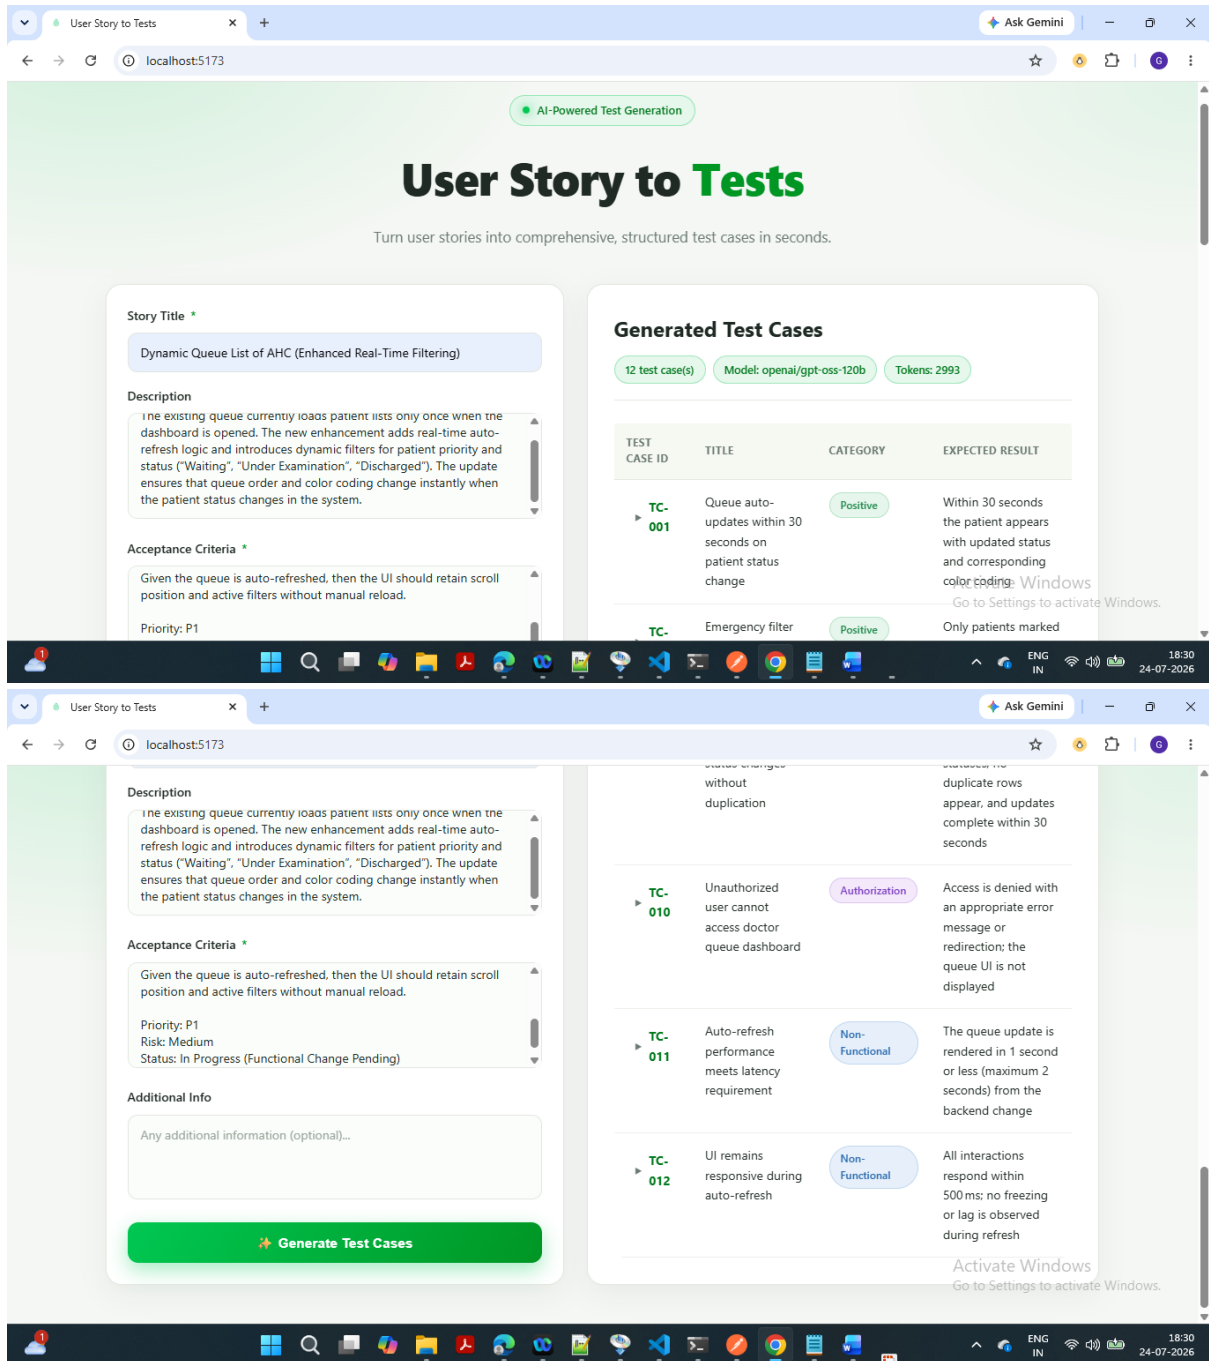

Base url: <https://geethaparasuraman87.atlassian.net>

Email id:

JIRA API token:

Give the below prompt in plan mode in VS – copilot

Provide the below prompt in Ask mode

Need to add "Connect Jira" button to establish the connection

Base url

Email id:

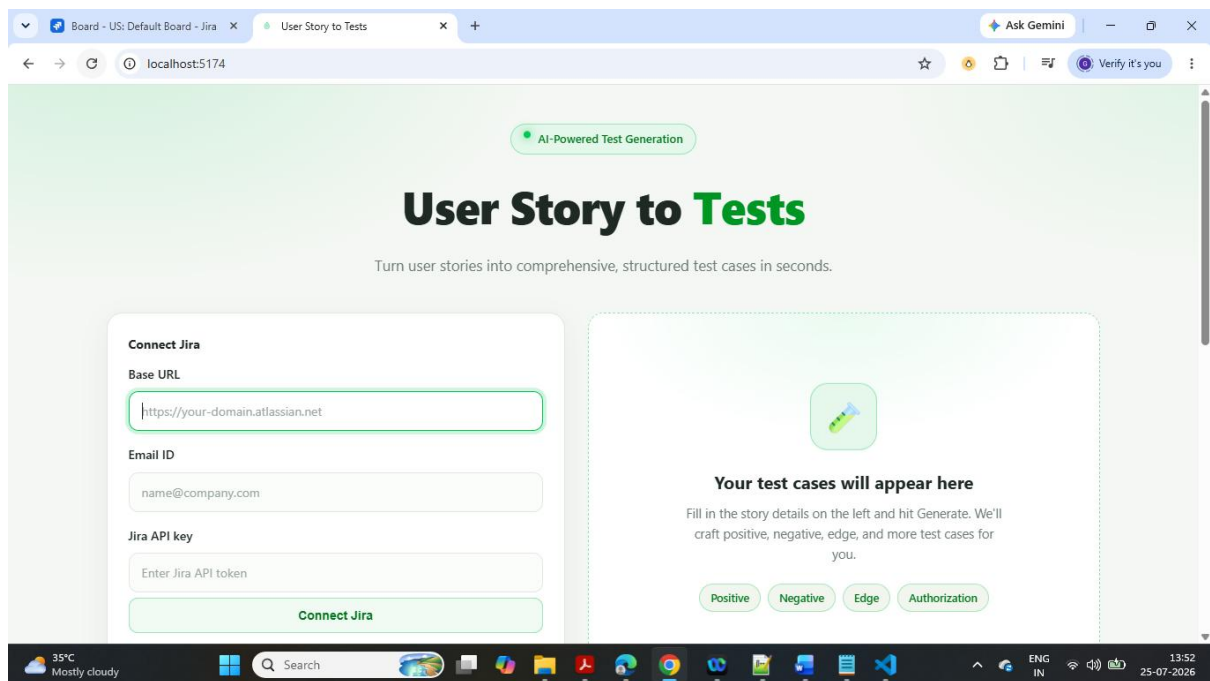

Jira API key

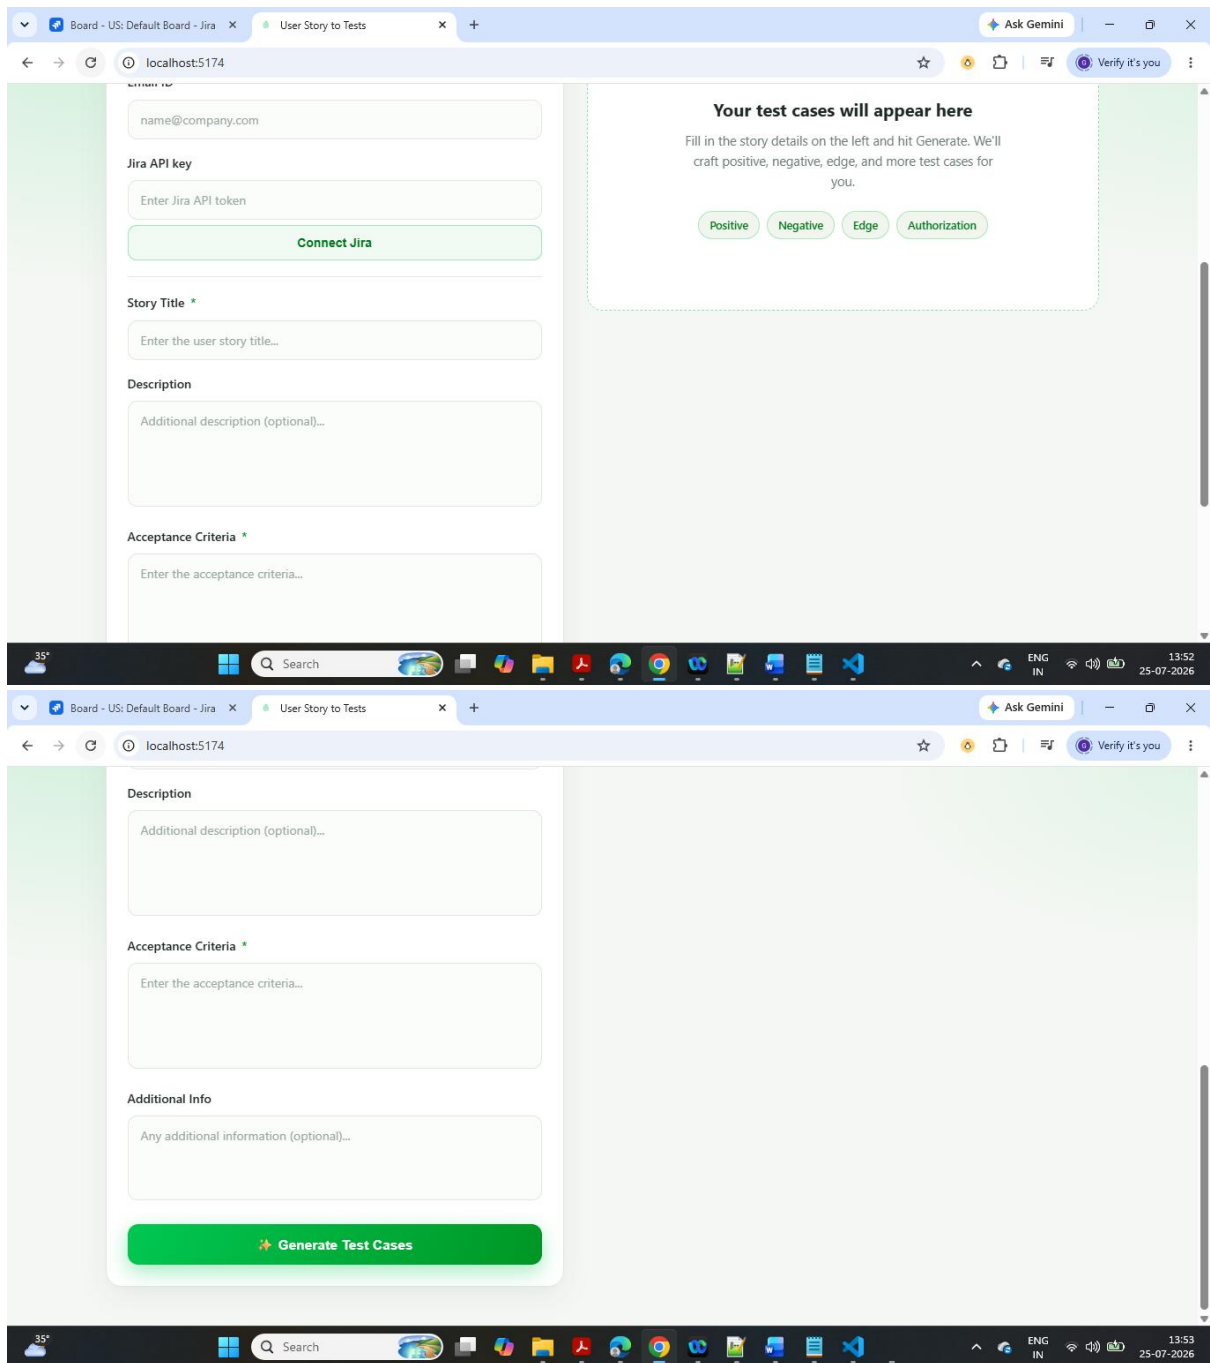

Add the variables in .env file

Once the agent provides the details of how to make changes. Change to agent mode and provide below prompt

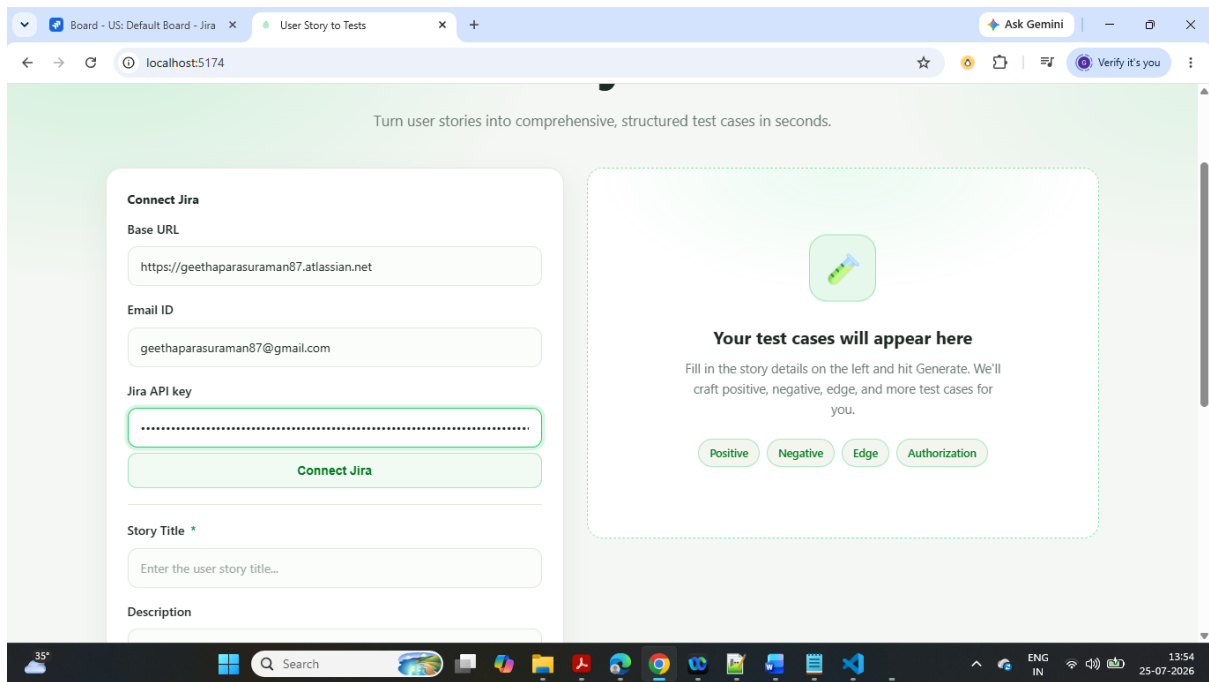

Go ahead with the implementation

UI is updated with connect jira section

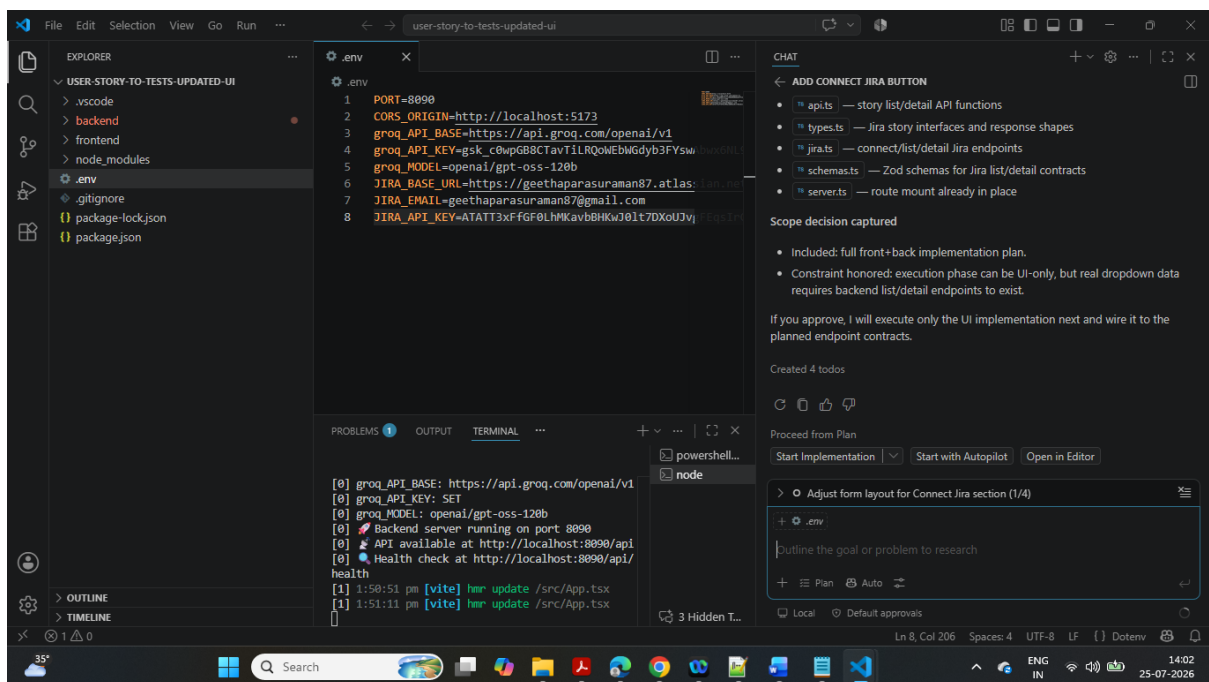

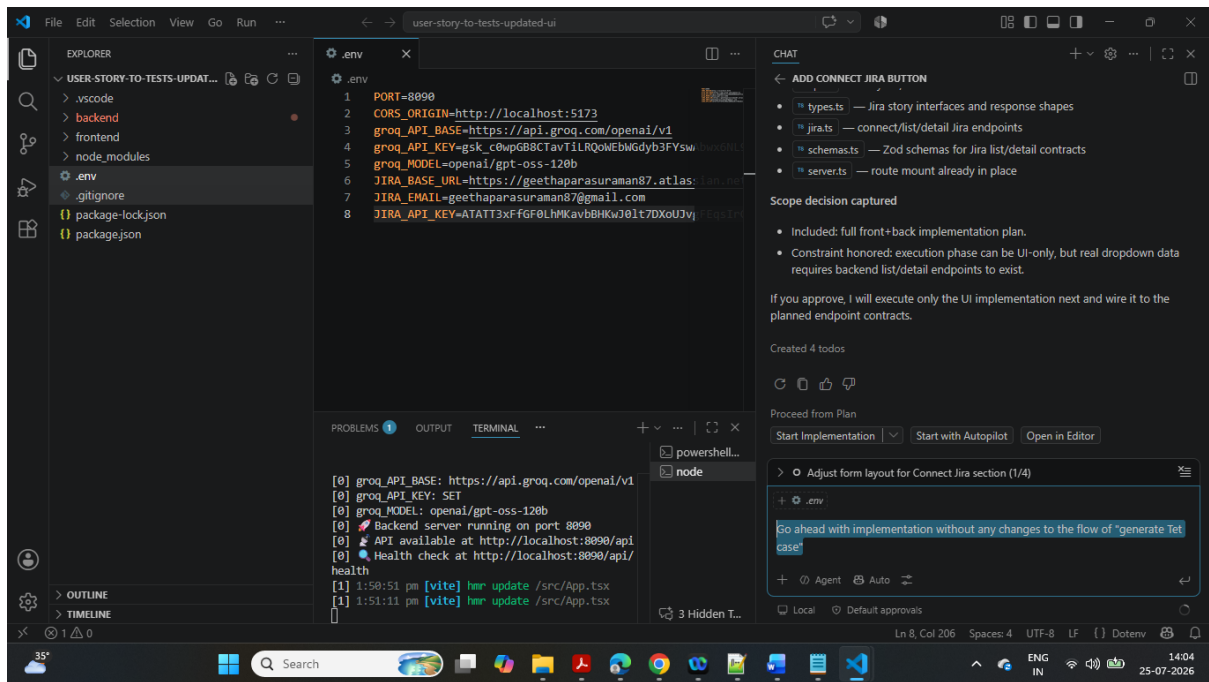

Now provide the values in base url, email id and api key and click connect jira

Nothing happens. So to provide the actions to take place on clicking the “Connect Jira” button provide the below prompt in Plan mode first

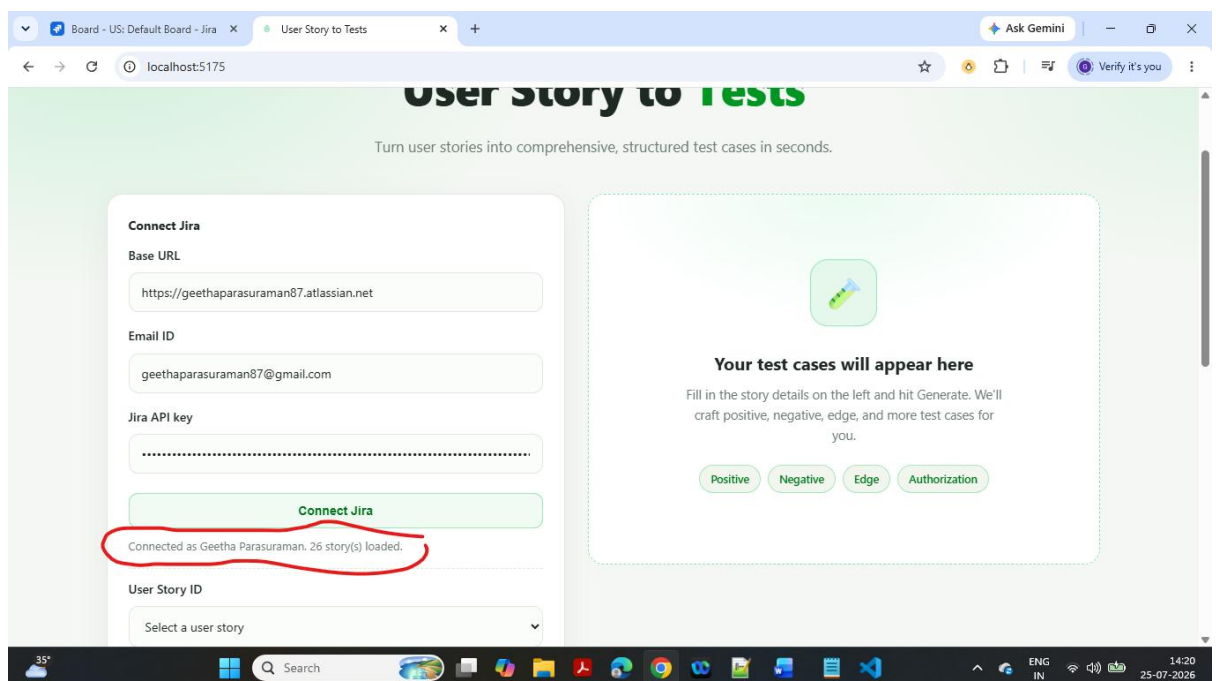

Once the plan is provided – in Agent mode either click “start implementation” or in agent mode type – Go ahead with implementation without any changes to the flow of "generate Tet case"

Received multiple errors before successful output in the UI. Some of them are

1. Since initially I mentioned implement only in UI, there was no actual connection established with JIRA. CORS error was displayed
2. So asked the Agent to fix it and implement the changes as requested. Agent has fixed the code by adding backend connection changes (proxy) with JIRA
3. The port is changed to 5175

Connection established successfully

The user stories are listed

Board - US: Default Board - Jira x User Story to Tests x + Ask Gemini

localhost:5175

Connect Jira

Connected as Geetha Parasuraman. 26 story(s) loaded.

User Story ID

Select a user story

Selecting a story auto-fills title, description, and acceptance criteria.

Story Title *

Enter the user story title...

Description

Additional description (optional)...

Acceptance Criteria *

Enter the acceptance criteria...

On selecting the user story id the details are populated in the form

Board - US: Default Board - Jira x User Story to Tests x + Ask Gemini

localhost:5175

Connect Jira

Loaded US-1 into the form.

User Story ID

US-1 - Consultant Dashboard My Inpatients

Selecting a story auto-fills title, description, and acceptance criteria.

Story Title *

Consultant Dashboard My Inpatients

Description

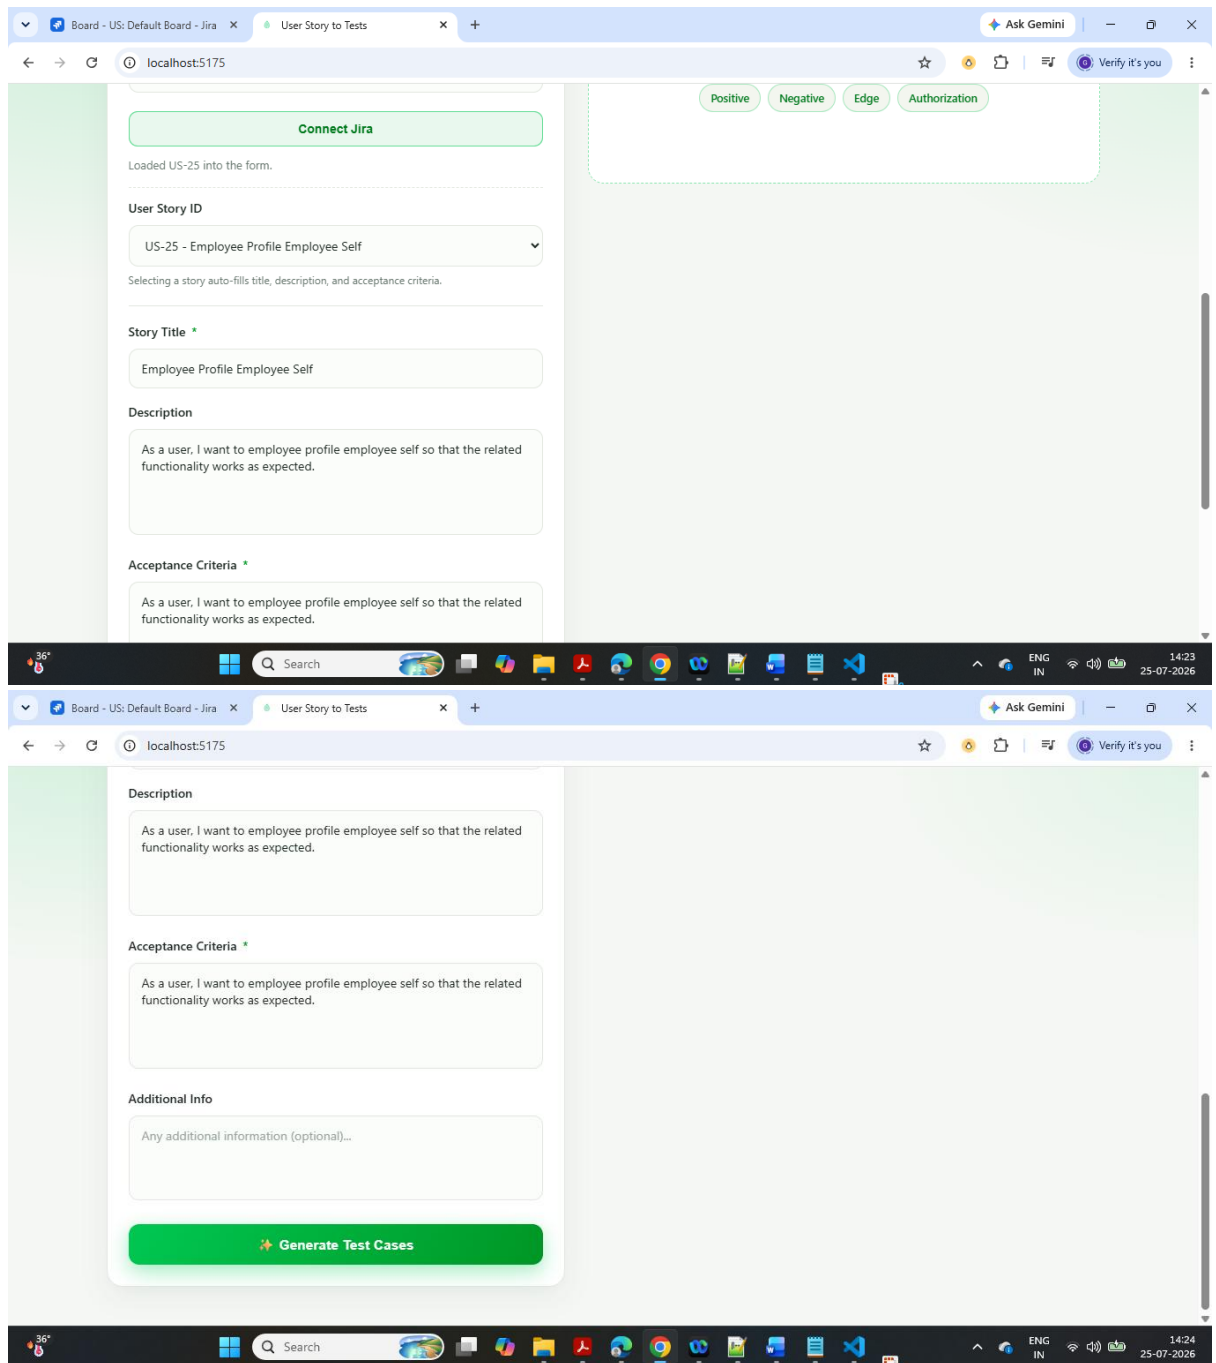

As a user, I want to consultant dashboard my inpatients so that the related functionality works as expected.

Acceptance Criteria *

As a user, I want to consultant dashboard my inpatients so that the related functionality works as expected.

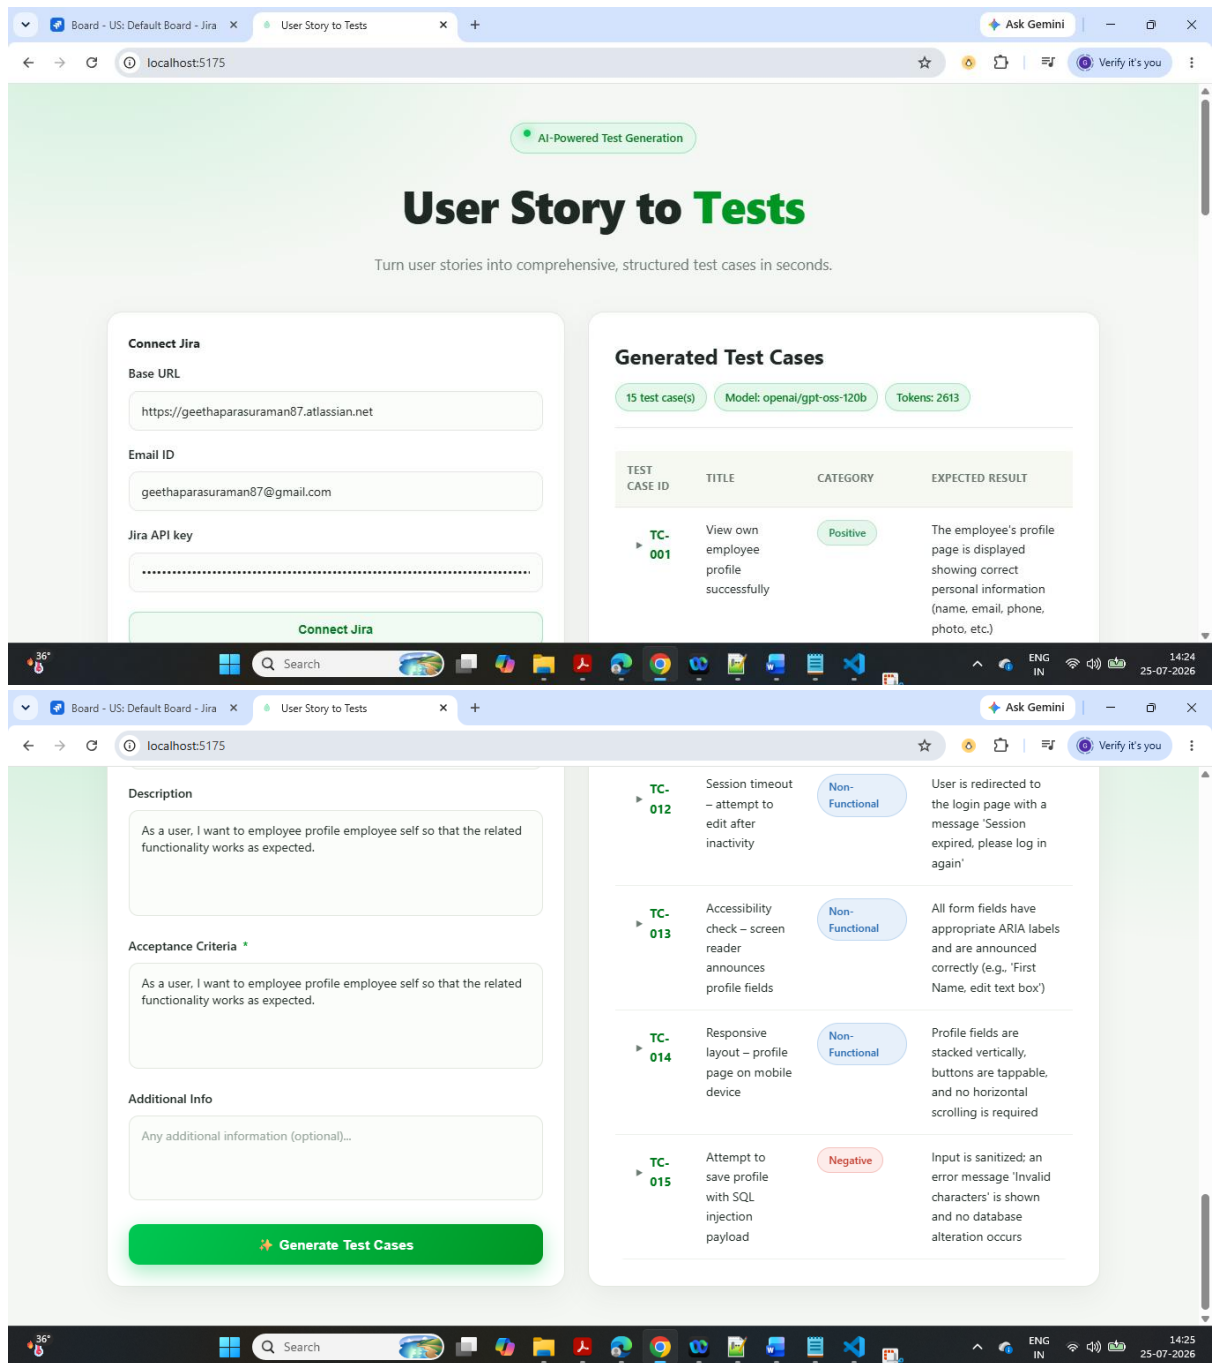

Positive Negative Edge Authorization

36° Search 14:22 25-07-2026

Click on generate test case to check if that functionality is still working

Yes the test case generation is working as before – Regression Passed.

Will ask the agent to change some look and feel of the form, how to display the error/status messages and update in a new document and upload it.

NOTE : the assignment of JIRA integration is successful. Will try to change the look and feel of the UI and update in new document.
